

The Israel Petrol Corporation - Case Study

Summary

Delek The Israel Petrol Corporation has Israel's second-largest number of gas stations and is the country's leading manufacturer of petroleum derivatives. An ambitious expansion plan should see Delek become Israel's largest fuel company in the coming few years. Delek is presently enjoying rapid growth in the number of gasoline stations it operates. The company is also diversifying into retail outlets within its stations which will serve the thousands of customers who use Delek's pumps each day. The company has partnerships with major multinational fuel companies. These include Exxon and its European subsidiary Esso Petroleum. Delek markets the lubricants of Esso at all its stations

The Challenge

Delek point of sales system and production floor in the gas station has many problematic transactions. The information is stored in log files. The number of transactions and the highly distributed environment prevent Delek from inspecting its line of business

The Solution

XPLG provides Delek a non intrusive problem resolution and transaction inspection system. All Business Transaction in Delek are being analyzed by XPLG

The business benefits

Using TxExpo, XpoLog Center, and XpoLog Search Engine saves Delek a lot of time and effort in accessing and analyzing the fuel processes. TxExpo is running daily analysis on each gas station, presenting all the fuel transactions and alerting on damaged processes. All the station's information and fuel transactions are available from the Delek Center, a fact that enables a full transparency to all stations across Israel from a single point
